

[Download v1.2](#)

By [Chris Coyier](#), based upon lots of smart stuff by [Remy Sharp](#),
significantly improved by [Douglas Neiner](#)

AnythingSlider

• Queenie's Killer Tomato Bagel Sandwich

Ingredients

- 1 bagel, split and toasted
- 2 tablespoons cream cheese
- 1 roma (plum) tomatoes, thinly sliced
- salt and pepper to taste
- 4 leaves fresh basil

><
[123456](#)
[Go](#)

Features

- Slides are HTML Content (can be anything)
- Next Slide / Previous Slide Arrows
- Navigation tabs are built and added dynamically (any number of slides)
- Optional custom function for formatting navigation text
- Auto-playing (optional feature, can start playing or stopped)
- Each slide has a hashtag (can link directly to specific slides)
- Infinite/Continuous sliding (always slides in the direction you are going, even at "last" slide)
- Multiple sliders allowable per-page (hashtags only work on first)
- Pauses autoPlay on hover (option)
- Link to specific slides from static text links ([Slide 6](#))

Usage & Options (defaults)

```
$('.anythingSlider').anythingSlider({
  easing: "swing",           // Anything other than "linear" or "swing" requires the easing plugin
  autoPlay: true,            // This turns off the entire FUNCTIONALY, not just if it starts running or not
  startStopped: false,       // If autoPlay is on, this can force it to start stopped
  delay: 3000,               // How long between slide transitions in AutoPlay mode
  animationTime: 600,        // How long the slide transition takes
  hashTags: true,            // Should links change the hashtag in the URL?
  buildNavigation: true,     // If true, builds and list of anchor links to link to each slide
  pauseOnHover: true,        // If true, and autoPlay is enabled, the show will pause on hover
  startText: "Start",        // Start text
  stopText: "Stop",          // Stop text
  navigationFormatter: null   // Details at the top of the file on this use (advanced use)
});
```

Linking directly to slides

```
$("#slide-jump").click(function(){
  $('.anythingSlider').anythingSlider(6);
});
```

Changelog

Version 1.2

- Bug Fix: When autoPlay was set to false, any interaction with the control would cause a javascript error.

Version 1.1

- Changed default easing to "swing" so didn't depend on any other plugins
- Removed extra junk (other plugins used for design, etc)
- Added Pause on Hover option
- Added options for passing in HTML for the start and stop button
- Added option to use custom function for formatting the titles of the navigation
- Added public interface for linking directly to certain slides

Version 1.0

- First version
